

Your security
is our priority

As long as attacks on privacy and data increase, spending on cybersecurity will not be enough as businesses look to stay one step ahead of hackers.

REFERRALS

INTRODUCTION

Segment was founded in 2014 as a **cyber security provider**: a company that can offer a wide range of services, from consulting services on cyber threats protection to advance technology training activities based on best practises, each one valuable for any business.

The company's growth has been driven by a group of high-profile ethical hacks able to prevent - or reduce - the risk of lost data, ensuring digital safety: an issue that has turned to be a serious concern for many businesses.

OUR DISCLOSURE'S ACTIVITIES

Being ethical hackers allows us to **discover numerous vulnerability** in many systems as the recent one we disclose: the Remote Code Execution bug which affects Mac users with Microsoft RDC installed.

The disclosure has rapidly raised the attention on this critical issue: as a fact, it was possible to totally compromise

a vulnerable computer remotely by triggering a user into opening a web link.

Our company coordinated the Microsoft Security Team in fixing the bug and helped thousands of users keep their systems safe.

OUR PRODUCT

We also developed a security tool called **HTCAP** (htcap.org). HTCAP is a **web application security scanner** designed to offer the maximum coverage in the discovery phase and it's able to analyze modern web applications that make intensive use of javascript and ajax technologies. Today HTCAP is the only available scanner able to recursively analyze a web application and offers a wider coverage if compared with the "state of art" tools, such as

Acunetix or NetSparker.

Due to its powerful engine, Htcap got the attention of big security companies expressing the need to integrate Htcap with their products to raise their services' coverage.

Over the years Segment has developed several security advisories and tools.

SEGMENT

MAXIMIZES COMPANIES SERVICES COVERAGE, COMPARED TO THE COMPETITORS.

COMPETITORS

OUR SERVICES

Segment specialises in different sectors of Cyber Security, offering not only protection from cyber threats, but also trainers able to educate your employees on the best practices of IT security.

Segment is **committed to helping clients secure their computing environments** from advanced threat, delivering solutions and services based on technical innovation and professional excellence.

WE CAN PROVIDE:

MANAGED SECURITY SERVICE

We can manage a Security Operation Centre in outsourcing which can implement log collection management, correlation and monitoring, (IDS) intrusion detection, vulnerability assesment, and asset discovery and inventory.

PENETRATION TEST

We make a simulation of a cyber attack, to evaluate the security of a system by conducting a series of targeted tests.

VULNERABILITY ASSESSMENT

We analyse different perimeters in order to evaluate their security status and consequently, prioritizing the resolution of any highlighted bug.

INCIDENT RESPONSE

If your system has been violated, we act in order to resolve the current incident.

PARTNERSHIP

CYBER SECURITY
PLATFORM

SECURE HOSTING

We transfer all this information on secure server to better protect them from cyber threats.

SECURITY TUTOR

We offer an expert that will provide your employees with the best practices of Cyber Security.

BUSINESS RECOVERY AND CONTINUITY

We aim to give you a continuity in your service supply. Therefore, we help your company to reduce the risks of data loss and service interruption.

Among numerous partnerships with world-leading vendors, the one with **Cyber Security Platform** enables us to offer **insurance plans that covers your business** on any potential damage caused by cyber attacks.
